

Guidelines for measurements of animal to fit into the cage:

	<p>A. = Animal length, from nose to tail</p> <p>B. = Animal height, standing in natural position</p> <p>C. = Animal height from ground to elbow</p> <p>D. = Animal width over shoulder blade</p>
--	--

Choice of correct cage size:

Cage length	A (length of the animal) + $\frac{1}{2}$ C (half measurement of height from ground to elbow)
Cage Height	B (height of the animal)
Cage Width	D (width over shoulder blade) x 2
